## Abstracts

According to our (Global Info Research) latest study, the global Service Virtualization market size was valued at USD 524 million in 2023 and is forecast to a readjusted size of USD 1024.3 million by 2030 with a CAGR of 10.0% during review period.

In software engineering, service virtualization is a method to emulate the behavior of specific components in heterogeneous component-based applications such as service-oriented architectures. It is used to provide software development and QA/testing teams access to dependent system components that are needed to exercise an application under test (AUT), but are unavailable or difficult-to-access for development and testing purposes.

North America is expected to have the largest market share and is projected to dominate the market during the forecast period.
