According to our (Global Info Research) latest study, the global Servo Motion Controller market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The servo motion controller is composed of hardware, firmware, software, etc. The hardware part includes microprocessors, memory, interface circuits, communication interfaces, power supplies, etc.; firmware refers to components that are solidified in microprocessors, memories, and programmable logic devices. The software; the software part is composed of real-time operating system, motion control instruction compiler, reprocessing and optimization of motion control parameters, motion control functions, communication management and other modules.

The servo motion controller is equivalent to the 'brain' of the motion control system. Based on the kinematics and dynamics model of the controlled object (moving mechanical mechanism), it performs motion planning and control prediction on the received control target instructions, and through a variety of Sensor information feedback realizes closed-loop control. The motion controller relies on built-in logic control, precise positioning, trajectory control and other high-performance motion control algorithms to complete specific motion trajectory, pose, position, speed and acceleration control, as well as precise command output (such as temperature, flow, pressure, displacement, etc.). The core technical indicators of the motion controller include the maximum number of control axes, the number of simultaneous control devices, the maximum number of linkage interpolation axes in a single coordinate system, supported analogy/digital I/O modules, basic motion planning mode, PSO (position synchronization Output) function, error compensation function, special motion control

algorithm (five-axis rotary tool centre point programming, gantry control, trajectory optimization, speed look-ahead, high-order S-curve acceleration and deceleration planning for space curve, contour accuracy and other algorithms), industry-specific functions (industrial robots, special functions for five-axis CNC, etc.), etc.

In the Chinese market, the key manufacturers of servo motion controller include Yaskawa Electric Corporation, Shenzhen Inovance Tech, Delta Electronics, Mitsubishi Electric, Panasonic, ABB, Omron, FANUC, Beckhoff, Gogol Technology, KUKA, China Leadshine Technology, Suzhou Veichi Electric, Estun Automation and STEP Electric Corporation, among which the top five manufacturers account for more than 50% of the market share. The largest manufacturer is Yaskawa Electric Corporation, which has more than 15% market share. In China, servo motion controllers are mainly produced in China, Japan, Germany and the United States. In terms of products, the dedicated servo motion controller has a relatively faster growth rate. At present, it accounts for nearly 50% of the market share, followed by PC-based servo motion controller. In terms of application, CNC machine tools are the largest application field, accounting for nearly 30% of the market share, followed by industrial robots and packaging.
