Abstracts

According to our (Global Info Research) latest study, the global Servo Motor market size was valued at US\$ 9867 million in 2024 and is forecast to a readjusted size of USD 14410 million by 2031 with a CAGR of 5.6% during review period.

Servo Motor is a motor used to precisely control angle, speed and position. It is widely used in automation equipment, robots, CNC machine tools, aerospace, automobiles and other fields. Servo motors are usually used in conjunction with controllers, encoders, etc. to achieve precise feedback and adjustment. The core principle of servo motors is closed-loop control. The position and speed of the motor are monitored in real time through feedback devices such as encoders, and the feedback information is passed to the controller, which adjusts the current and voltage to achieve the predetermined goal. This closed-loop system can keep the motor running stably even when the load changes.

Humanoid robots may become one of the largest incremental applications of servo motors

Servo motors are an important part of automated control systems and play a decisive role in the performance and precision of industrial robots. In industrial applications, servo motors are widely used in mechanical processing, automated production lines, smart warehouses and other fields. With the advancement of technology and the continuous improvement of quality and precision requirements, the application scope of servo motors will become more and more extensive.

As the global industry transforms to automation and intelligent manufacturing, the demand for servo motors continues to grow. Servo motors have the advantages of

precise positioning and high-efficiency control in automated systems and are widely used in CNC machine tools, robots, automated assembly lines and other scenarios.

As the application of robots in manufacturing, logistics, medical care, agriculture and other industries continues to expand, the demand for servo motors with high requirements for precision and reliability is also increasing. Especially in industrial robots, collaborative robots and service robots, the use of servo motors has greatly improved the flexibility and precision of equipment.

According to the parameters published by Tesla's humanoid robot Tesla Bot, the humanoid robot is expected to have more than 40 joints. According to the number of 40 joints, it corresponds to the use of 40 servo motors. As the sales of humanoid robots gradually increase, the demand for motors is expected to usher in exponential growth. According to conservative estimates, if the sales volume of humanoid robots reaches 1 million units and the neutral assumption is that a single humanoid robot uses 40 motors, the corresponding robot servo motor consumption is expected to reach 40 million units.
