According to our (Global Info Research) latest study, the global Servo Pushing and Dispensing Glue Machine market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Servo Pushing and Dispensing Glue Machine is one kind of phased array flaw detector. Full focusing is a multidirectional technique. Due to the small size of a single wafer, it excites spherical waves, and the direction of the sound beam propagates in all directions. Full focusing does not make delay rule adjustment during excitation, but excites all wafers in sequence, and makes all wafers receive these echo signals again. The time interval of wafer excitation is much longer than the adjustment time of PAUT delay rule.
