## Abstracts

The global Servo Rotary Gripper market size is expected to reach \$ 206 million by 2032, rising at a market growth of 7.0% CAGR during the forecast period (2026-2032).

In 2025, global Servo Rotary Gripper production reached approximately 44k units, with an average global market price of around US\$2800 per unit.

A servo rotary gripper is an integrated “grip + rotate” end-effector driven by a servo motor with closed-loop control, enabling precise angular positioning, flipping, or continuous rotation while holding a workpiece, with programmable control of grip force, speed, acceleration, and position. Typical architecture includes a servo motor and drive, reduction/transmission components, a gripper mechanism (parallel/angular/three-jaw, etc.), rotary bearings and positioning structures, plus sensor feedback such as encoders and force/grip detection. It interfaces with robot controllers via industrial fieldbus or I/O, supporting high cycle rates, high repeatability, and flexible changeovers in automated operations.

Upstream for servo rotary grippers includes servo systems, precision mechanics, and electronics: servo motors and drives, reducers (harmonic/planetary) and gear transmissions, precision bearings and guides, encoders and position/force sensors, control ICs and communication modules, plus structural materials (aluminum/steel), seals, and lubricants. Midstream end-effector manufacturers optimize mechanism and thermal design, backlash and stiffness, develop grip-force control and rotation positioning algorithms, integrate communication protocols (e.g., EtherCAT/PROFINET), and validate lifetime and environmental reliability. Downstream customers include robot OEMs, system integrators, and end manufacturers across 3C electronics assembly, automotive parts assembly and machine tending, battery/PV manufacturing, and

food/pharma packaging and sorting. Representative upstream suppliers include servo/drives (Yaskawa, Mitsubishi Electric), bearings (SKF, NSK), and reducers (Harmonic Drive, Nabtesco); representative downstream players include robot OEMs (ABB, FANUC), electronics manufacturers (Foxconn), and automotive component makers (Bosch).

The annual production capacity of a single-line Servo Rotary Gripper is approximately 1k unit, with a gross profit margin of approximately 20%-40%.

This report studies the global Servo Rotary Gripper production, demand, key manufacturers, and key regions.
