Abstracts

According to our (Global Info Research) latest study, the global Settlement Gateway Energy Meter market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The settlement gate energy meter is specially used for gate settlement of regional power grids and power plants with high voltage levels, as well as very large industrial and commercial users such as electrified railways with frequent load changes.

Among all measurement points, gate measurement is the most important form of measurement. It is set up as a settlement point for electricity trade between power grid operating enterprises, so a huge amount of measured electricity is often generated. Once the gateway electric energy meter fails or has other abnormalities and is not handled in time, it will lead to serious power loss. Therefore, improving and strengthening the on-site management of the gateway electric energy meter is the top priority of the metering field work. The improvement in accuracy means that power consumption measurement is more accurate. For some manufacturing companies, during daytime production, the power load is within the normal working range of the metering equipment, but at night, there is only a small amount of lighting load. Electric energy measurement The device operates in an abnormal working state with light load, thereby increasing the error. After the accuracy of the energy meter is improved, even a weak current will be recorded.
