Abstracts

The global Sewage Sludge Recycling Solution market size is expected to reach \$ 1875 million by 2032, rising at a market growth of 4.3% CAGR during the forecast period (2026-2032).

Sewage Sludge Recycling Solution refers to an integrated solution for treating and recovering sludge generated from municipal wastewater treatment plants, industrial wastewater facilities, and wastewater treatment systems in industrial parks. It typically involves sludge thickening, dewatering, drying, stabilization, anaerobic digestion, composting, incineration with energy recovery, building material utilization, land improvement, and nutrient recovery. The solution focuses not only on safe sludge disposal, but also on converting organic matter, calorific value, phosphorus, nitrogen, and other recoverable resources in sludge into energy, fertilizer, construction materials, or reusable by-products, thereby reducing landfill pressure, transportation costs, and secondary pollution risks.

The Sewage Sludge Recycling Solution market is moving from traditional sludge treatment and disposal toward resource recovery, energy utilization, and low-carbon management. As wastewater treatment capacity expands and sludge generation continues to increase, landfill and simple off-site disposal methods are becoming less sustainable. Technologies such as anaerobic digestion for biogas production, sludge drying and incineration, cement kiln co-processing, composting, land application, phosphorus recovery, and building material utilization are expected to see wider adoption. In addition, future projects will place greater emphasis on energy efficiency, carbon emission reduction, odor control, heavy metal risk management, and digital full-process operation. Overall, sewage sludge recycling solutions are becoming an important part of circular economy development and green wastewater infrastructure.
