Abstracts

Sewage Treatment Facilities companies deal with designing, constructing, operating and maintaining sewage water systems. Sewage utilities treat wastewater from homes, manufacturing plants, commercial and industrial establishments and are generally operated by local or national governments. Sewage utilities handle wastewater through sewage lines. The wastewater is recycled through water treatment plants and the treated water is then supplied to domestic or commercial establishments.

Scope of the Report:

Micro-pollutants which are challenging the treatment capability of conventional wastewater treatment plants are being treated with advanced technologies. Micro-pollutants are contaminants originating from pharmaceutical residues, household chemicals, personal care products and pesticides. Technologies such as moving bed biofilm reactors (MBBR), ozone-based advanced oxidation, adsorption and powdered activated carbon (PAC) are being used to remove micro-pollutants from wastewater. For instance, in Germany, advanced technologies such as GE's membrane bioreactor and powdered activated carbon technology are proving to be a cost-effective way of removing micro-pollutants from wastewater.

The global Sewage Treatment Facilities market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
