SF6 dew point analyzer is a precision measuring instrument specially designed for SF6 (sulfur hexafluoride) gas. It is used to detect the water vapor content in SF6 gas, that is, the dew point temperature. SF6 is a widely used insulation and arc-extinguishing medium in the power industry. Its purity and moisture content directly affect the safe operation of electrical equipment. Through advanced sensor technology and precise data processing algorithms, the analyzer can quickly and accurately measure trace amounts of moisture in SF6 gas, providing reliable data support for the maintenance, repair and fault prevention of power equipment, and ensuring the stable operation of the power system.
