SFP stacking cable is a high-performance cable used to connect network devices. It supports the stacking function of small form-factor pluggable (SFP) modules, allowing multiple devices to form a logical whole through the cable. The characteristics of this cable are its compact design, flexible connection method and high-speed data transmission capability. The advantage of SFP stacking cable is that it can simplify the network architecture, improve the efficiency and reliability of data transmission, and support hot plugging for easy maintenance and expansion. Due to its high bandwidth and low latency characteristics, SFP stacking cable has become an ideal choice for achieving high-speed network connection and close collaboration between devices. It is widely used in occasions that require high-speed and stable communication, providing users with efficient and reliable connection solutions.
