The global Shaker for Incubator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The incubator shaker is a device used in laboratory applications such as cell culture, cell culture, separation and purification. It can evenly distribute cells in culture by vibrating, promoting cell growth and proliferation. The special shaker for the incubator usually consists of a vibration platform, a controller and a fixture, etc. The fixture can fix different types of culture containers such as culture bottles, centrifuge tubes or multi-well plates. The vibration platform can simulate different biological environments through different vibration modes and frequencies to meet different experimental needs. Oscillators for incubators are widely used in biomedical research, drug screening, cell engineering, tissue engineering and other fields.
