According to our (Global Info Research) latest study, the global Shared Charging Treasure market size was valued at US\$ 10920 million in 2024 and is forecast to a readjusted size of USD 16190 million by 2031 with a CAGR of 5.9% during review period.

The shared charging treasure refers to the charging and renting equipment provided by the enterprise. The user can use the mobile device to scan the two-dimensional code on the screen of the device to deliver the deposit, and then rent a charging treasure. After the charging treasure is successfully returned, the deposit can be withdrawn at any time and returned to the account. It can solve the problem that the user has no power in the outdoor mobile phone, so that you don't miss an important phone call and an important message. The charging process of charging treasure can be roughly divided into four steps, scan code - registration - payment - lending, in general, the entire process takes less than 3 minutes.

In recent years, the use of portable power banks or charging devices has become increasingly popular as people rely more on mobile devices such as smartphones, tablets, and laptops. These portable chargers allow users to recharge their devices on the go without requiring access to a wall outlet. The concept of sharing these charging devices could be seen as a way to provide charging solutions to individuals who may not have their own power bank or need temporary access to one.
