Abstracts

According to our latest research, the global Shared Vehicles market size will reach USD 399110 million in 2031, growing at a CAGR of 14.4% over the analysis period.

The practice of renting out cars to numerous customers on a shared premise for short-term use is referred to as the shared vehicle industry. Since it offers an option to conventional vehicle ownership and helps to address issues like traffic gridlock, environmental concerns, and the high cost of car ownership, the idea of shared mobility has become more and more popular in recent years.

Ownership of a vehicle involves several interconnected factors such as financing, fuel costs, maintenance, registration/taxes, upkeep, and depreciation. The cost of owning a car increases every year, with depreciation accounting for about 43% and maintenance and fuel expenses accounting for around 25%, according to the American Automobile Association (AAA). The cost of fuel and maintenance has increased in recent years, and this trend is expected to continue. As cities become increasingly congested, owning a car has become more of a hassle than an asset. In 2020, the average cost of owning and operating a new car increased by USD 279 to USD 9,561 compared to 2019. Micromobility refers to the ability to travel short distances using lightweight vehicles such as bicycles, scooters, mopeds, and longboards. Shared micro-mobility is a viable option for commuters looking for a convenient mode of transportation in the city without having to deal with public transit. The concept of micromobility has a significant impact on the use and profitability of bikes and scooters. Micromobility presents a significant opportunity to address the growing congestion, especially in metropolitan areas.
