## Abstracts

According to our (Global Info Research) latest study, the global Shared Web Hosting Service market size was valued at USD 22770 million in 2023 and is forecast to a readjusted size of USD 61800 million by 2030 with a CAGR of 15.3% during review period.

Shared web hosting service refers to a web hosting service where many websites reside on one web server connected to the Internet. This is generally the most economical option for hosting, as the overall cost of server maintenance is amortized over many customers.

Shared web hosting means exactly what it says – you share a server with other users who are running their own websites from that hardware. Every customer gets a portion of that physical server for their own use. The main strength here is that this is a cost-effective solution, and because you're prepared to share hardware with other folks, you'll naturally be playing less than the outlay for dedicated hosting. By the same token, however, you're also sharing resources with others, and that means that the performance you'll get will likely be a fair bit slower (and indeed generally less consistent).

The Global Info Research report includes an overview of the development of the Shared Web Hosting Service industry chain, the market status of Commercial Operation (IP-based, Name-based), Government Department (IP-based, Name-based), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Shared Web Hosting Service.
