## Abstracts

According to our (Global Info Research) latest study, the global Sharing Economy market size was valued at US\$ 7569 million in 2024 and is forecast to a readjusted size of USD 23890 million by 2031 with a CAGR of 17.8% during review period.

The sharing economy is a new economic model that efficiently matches the supply and demand of idle resources, skills or services through digital platforms. Its core lies in the separation of ownership and use rights, covering areas such as travel (such as Uber, Didi), accommodation (Airbnb, Tujia), office (WeWork), and labor (Meituan crowdsourcing).

The driving forces for the growth of the sharing economy include technological progress (5G, AI algorithms to optimize resource matching), consumer demand for flexibility and cost-effectiveness (such as Generation Z preferring 'use rather than ownership'), and the promotion of the reuse of idle resources under the goal of carbon neutrality (sharing cars reduces carbon emissions by 30%). However, the market faces challenges such as unstable profit models (such as early losses in shared bicycles), regulatory games (data security and labor rights disputes) and homogeneous competition. In the future, the industry will evolve towards vertical segmentation (such as shared medical equipment, laboratory capacity) and ecological integration (travel + local life service closed loop). North America, China and Europe will still be the main battlefields, while emerging markets such as Southeast Asia and Latin America have highlighted their potential under policy relaxation.

This report is a detailed and comprehensive analysis for global Sharing Economy market. Both quantitative and qualitative analyses are presented by company, by region & country, by Type and by Application. As the market is constantly changing, this report
