According to our (Global Info Research) latest study, the global Sharing Portable Battery market size was valued at US\$ 1904 million in 2025 and is forecast to a readjusted size of US\$ 3082 million by 2032 with a CAGR of 6.8% during review period.

Sharing Portable Battery is an on-demand mobile charging service model built on a distributed power bank network and IoT-based management system. Users rent portable batteries via QR code scanning to provide short-term charging for smartphones and other mobile devices, paying based on usage duration or frequency. The model relies on offline scenario networks such as shopping malls, restaurants, and transportation hubs for deployment and traffic conversion, featuring high-frequency demand, instant service, and an asset-light operation structure.

The sharing portable battery market has gradually entered a consolidation phase after an early rapid expansion, with increasing industry concentration. Leading operators strengthen their advantages by densifying point-of-sale deployment and improving device turnover efficiency. Current demand is driven mainly by high battery consumption scenarios of smartphones, further reinforced by short video usage, mobile payments, and frequent mobility. In terms of competition, the industry is shifting toward a 'platform + scenario-based partnership' model, where profitability depends more on location quality, daily rental frequency per unit, and refined operational capabilities. Overall market growth is stabilizing, while still offering penetration potential in lower-tier cities and emerging overseas markets.
