According to our (Global Info Research) latest study, the global Sharing Robotics market size was valued at US\$ 145 million in 2025 and is forecast to a readjusted size of US\$ 325 million by 2032 with a CAGR of 12.2% during review period.

Sharing Robotics refers to a robot rental and service platform based on the sharing economy model. It offers short-term or long-term rental services by leasing robot equipment as a shared resource. This concept differs from traditional equipment rental, focusing on enabling more businesses and individuals to use robot equipment at a low cost through on-demand leasing, without incurring high purchase costs. Sharing Robotics platforms typically provide robot-related services, including maintenance, upgrades, technical support, and data management, allowing users to focus on specific business needs. The global gross profit margin for shared robots is projected to be approximately 20%–35% by 2025.

Against the backdrop of the accelerated development of embodied intelligence and humanoid robots, the industry is facing a common bottleneck: while technological capabilities continue to break through, the cost of application implementation is high, service chains are complex, and scenarios are severely fragmented, making it difficult for robot products to enter the commercial and public service systems on a large scale. Robot rental platforms emerged in this context. Through an innovative model of 'shared rental + platform-based scheduling,' the originally high-barrier, high-priced robot products are transformed into on-demand, standardized service capabilities. Robots are no longer one-off devices, but rather 'production factors' that can be flexibly deployed, rapidly mobilized, and paid for based on results. By connecting supply, organizing services, and amplifying demand, the platform is building a service network covering multiple participants, rather than simply facilitating transactions.
