A sheetfed scanner, also known as an automatic document scanner or ADF scanner, is a digital imaging system specifically designed for scanning loose sheets of paper. It is widely used by businesses to scan office documents and less frequently used by archives and libraries to scan books that have been disbound or other robust unbound documents¹. Sheetfed scanners hold small to large stacks of paper, 20 to 500 sheets, and can digitize dozens of times faster than a flatbed scanner. The paper is drawn from a sheet feeder and passes across the machine's image sensors, ending in the output tray.
