The global Shelf Edge Digital Signage market size is expected to reach \$ 3518 million by 2032, rising at a market growth of 10.3% CAGR during the forecast period (2026-2032).

Digital shelf edge signage is a small digital display device installed on the edge of retail shelves to display prices, promotional information, and product descriptions. It enables real-time price updates, centralized management, and dynamic advertising, effectively improving store operational efficiency and customer experience. The upstream of the industry chain includes components such as LCD or e-paper displays, microcontrollers, batteries, wireless communication modules, and plastic casings; the midstream involves software and hardware integration and system platform development; and the downstream is mainly used in supermarkets, convenience stores, pharmacies, and specialty retail stores, with supporting system deployment, installation, maintenance, and data management services. In 2025, the global production of digital shelf edge signage was approximately 60 million units, with a global average market price of approximately US\$28 per unit. The gross profit margin of major companies in the industry is between 20% and 35%. Global production capacity in 2025 was approximately 80 million units.

The shelf edge digital signage market is expanding rapidly with the digital transformation of retail. Retailers increasingly adopt electronic shelf labels and digital displays to improve pricing accuracy, reduce labor costs, and enable dynamic promotions. Integration with IoT platforms and centralized management systems allows real-time updates across thousands of stores. E-paper and low-power technologies extend battery life and reduce operating costs. With the growth of smart stores and omnichannel retailing, the market is expected to maintain double-digit growth over the

next several years.
