A shell-and-tube type graphite heat exchanger is a specific design of a heat exchanger that uses graphite as the material for the heat exchange surfaces. Heat exchangers are devices designed to transfer heat between two or more fluids to either cool or heat them for various industrial processes. The shell-and-tube configuration is a common and versatile design used in heat exchangers.

Ongoing research and development focus on improving materials for heat exchangers, including graphite. Manufacturers may explore new formulations, coatings, or composite materials to enhance the performance, durability, and corrosion resistance of graphite heat exchangers.
