The global Shengagliptin Phosphate Tablets market size is expected to reach \$ 59.03 million by 2032, rising at a market growth of 12.5% CAGR during the forecast period (2026-2032).

Sentagliptin Phosphate Tablets are a Class 1 innovative oral hypoglycemic drug independently developed in China, belonging to high selectivity DPP-4 inhibitors. By inhibiting the activity of dipeptidyl peptidase 4, the drug delays the degradation of incretins in the human body and bidirectionally regulates the secretion of insulin and glucagon, so as to steadily control blood glucose levels. It exerts a mild hypoglycemic effect with a low risk of hypoglycemia and favorable medication safety and tolerance. It is mainly applied to improve blood glucose control in adult patients with type 2 diabetes, and can be used as monotherapy or in combination with hypoglycemic agents such as metformin. As a newly launched domestic innovative metabolic drug, Sentagliptin Phosphate Tablets diversify the clinical treatment options for type 2 diabetes in China and meet the long-term management needs of chronic diseases. Supported by clinical promotion and favorable medical policies, it enjoys promising development prospects in the hypoglycemic drug market. In 2025, global Sentagliptin Phosphate Tablets production reached approximately 1.6 million bottles.

Sentagliptin Phosphate Tablets are a Class 1 innovative DPP-4 inhibitor independently developed in China. Relying on excellent clinical efficacy and safety, it has outstanding market competitiveness in the treatment of type 2 diabetes. As a new generation of highly selective preparation, the drug features an extremely low risk of hypoglycemia and good tolerance. It meets the clinical needs of elderly patients and those with combined high-risk factors. Meanwhile, it supports flexible combined medication regimens and can be used synergistically with a variety of hypoglycemic drugs,

expanding clinical application scenarios. Supported by the National Major New Drug Creation Special Project, it enjoys a long patent protection period and a stable market life cycle. At present, the domestic DPP-4 inhibitor market faces fierce competition with coexisting imported original drugs and domestic generic drugs. As an innovative drug with differentiated advantages, Sentaglipin Phosphate Tablets is expected to gradually increase its market share through medical insurance access, clinical academic promotion and grassroots market penetration. With the growing demand for chronic disease management of diabetes and the continuous release of policy dividends for innovative drugs, this product will further enrich clinical treatment options, accelerate the import substitution of domestic innovative hypoglycemic drugs, and present remarkable long-term market development potential.
