According to our (Global Info Research) latest study, the global Shielded Video Cable market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A shielded video cable is a cable used to transmit video signals, and its main feature is that it has a shield to protect the signal from external electromagnetic interference. The shield can be made of a material such as aluminum foil, copper foil, or a braid that wraps around the center conductor and insulation of the cable. The shielding layer can effectively reduce the influence of external electromagnetic interference on the video signal, and improve the transmission quality and stability of the video signal. In addition, shielded video cables usually have the characteristics of high bandwidth, low transmission loss, and strong anti-interference, and are often widely used in surveillance, video conferencing, radio and television and other fields.
