The Electronic Chart Display and Information System (ECDIS) is a navigation tool used on ships to display electronic navigational charts (ENCs) and other relevant information. Over the years, ECDIS has evolved and developed several trends that are shaping its future. The International Maritime Organization (IMO) has mandated the use of ECDIS on certain types of vessels, leading to increased adoption worldwide. More and more ships are transitioning from traditional paper charts to ECDIS for navigation purposes. ECDIS is being integrated with other onboard systems, such as Automatic Identification System (AIS), radar, and weather information systems. This integration allows for a more comprehensive and efficient navigation experience, providing real-time data and enhancing situational awareness. ECDIS systems are becoming more user-friendly with intuitive interfaces and enhanced features. The focus is on providing a seamless and easy-to-use experience for navigators, reducing the risk of human error and improving overall safety.
