## Abstracts

According to our (Global Info Research) latest study, the global Ship Flooring market size was valued at US\$ 1334 million in 2025 and is forecast to a readjusted size of US\$ 2012 million by 2032 with a CAGR of 6.7% during review period.

In 2025, global production of ship flooring reached approximately 72 million square meters, with an average selling price of US\$18 per square meter. Ship flooring refers to a specialized flooring system used in the interior cabins and some deck areas of ships, ferries, cruise ships, and offshore platforms. It must simultaneously meet performance requirements such as aesthetics, fire resistance certification, wear resistance, slip resistance, easy cleaning, stain resistance, comfort, sound insulation/vibration reduction, antistatic properties, and resistance to humid and salt spray environments. It is widely used in cruise ships, ro-ro passenger ships, passenger ferries, merchant ships, naval vessels, and offshore platforms. The upstream mainly includes PVC resin, rubber, nylon/wool fiber, PU/epoxy resin, mineral fillers, fiberglass, aluminum, plywood, flame retardants, surface treatment agents, adhesives, and noise-reducing padding; the midstream involves flooring manufacturing, flame retardant and acoustic design, cutting and prefabrication, certification testing, and installation system development; the downstream connects shipyards, interior general contractors, cruise lines, ferry operators, and offshore engineering EPC companies. Gross profit margins range from approximately 20% to 35%.
