# **Abstracts**

The ship plate is a hot rolled steel sheet produced to manufacture hull structures as required by the code of conduct. In the 1870s carbon was added to molten iron to make steel. Iron and steel were soon being used in ship production. These irons and steels were known as ABS (American Bureau of Shipping) iron and steel. They constitute specific types of iron and steel utilized to build ships. How they are manufactured and used is regulated by the ABS standardized grading and specification system.

Scope of the Report:

This report focuses on the Ship Plate in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. A critical factor for growth in Asia region is availability of raw materials at lower prices coupled with the presence of large number of suppliers and producers. China is anticipated to lead growth of the Asia Pacific market over the next six years. All manufactures in the world are committed to the improvement of product. These two years, some of Chinese manufactures can almost catch up with the world's leading technology too. Most technologies are developed by the manufacturers instead of importing from other companies. With the recovery of world shipbuilding industry and the increased proportion of output for high technology and high added - value ships, China will enter into the list of world powerful shipbuilding countries. Steel plates have continually met the diverse challenges of shipbuilding, including weight reduction and higher speeds, improved construction efficiency, and longer life in

tankers, container ships, bulk carriers, and other types of vessels.

On the other hand, Global shipyard output and capacity have fallen significantly since

the peak years. However, many remaining yards still don't need to look too far ahead to see the end of their current workload. The shipbuilding industry will be hoping to see a return to a more active newbuilding market sooner rather than later. The worldwide market for Ship Plate is expected to grow at a CAGR of roughly 15.8% over the next five years, will reach 30200 million US\$ in 2023, from 12500 million US\$ in 2017, according to a new GIR (Global Info Research) study.
