## Abstracts

The global Ship Rolling Stabilization System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ship rolling stabilization systems are fins or rotors mounted beneath the waterline and emerging laterally from the hull to reduce a ship's roll due to wind or waves. Roll stabilization systems have been around for a long time, but are typically known for being used on larger passenger ships and superyachts. However, with the dramatically increased comfort and usability stabilizers add to any boat, it has also left owners of small leisure vessels wanting these systems.
