Abstracts

The global Ship Sacrificial Anode market size is expected to reach \$ 529 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

A Ship Sacrificial Anode is a consumable metallic component in a vessel's cathodic protection system, usually made from aluminum alloy, zinc alloy or magnesium alloy and attached by welding, bolting or clamping to the hull and underwater metal components. In seawater, brackish water or freshwater, the anode forms a galvanic couple with the protected metal, oxidizes preferentially, and keeps the hull, rudder, shaft, propeller and internal steel structures in a cathodic state, thereby reducing corrosion, extending dry-docking intervals and lowering vessel maintenance costs. In 2025, Global Ship Sacrificial Anode sales are estimated at 80,000 tons, with an average ex-works price of 4,600 US\$/Ton. The Ship Sacrificial Anode industry chain starts from aluminum ingots, zinc ingots, magnesium ingots, trace alloying elements such as indium, tin and cadmium, steel inserts, straps, bolts, weld-on cores, molds and packaging materials.

The Ship Sacrificial Anode market is mainly driven by the dual demand from fleet maintenance and newbuilding installation. Vessels operate for long periods in saline, humid and conductive environments, and hulls, rudders, shaft systems, sea chests and ballast tanks all require continuous cathodic protection. Because sacrificial anodes are consumed during service and replaced during dry-docking or routine maintenance, the installed fleet creates resilient recurring demand even when seaborne trade growth fluctuates. Aluminum anodes continue to replace part of traditional zinc demand due to their lower weight and higher electrochemical capacity, while environmental concerns over heavy-metal discharge also support material upgrading; however, the market remains affected by metal-price volatility, vessel maintenance budgets, quality

differences among low-cost cast products and class-certification requirements.

This report studies the global Ship Sacrificial Anode production, demand, key manufacturers, and key regions.
