According to our (Global Info Research) latest study, the global Shipborne Shore Power System market size was valued at US\$ 3033 million in 2024 and is forecast to a readjusted size of USD 9130 million by 2031 with a CAGR of 17.0% during review period.

Shipborne Shore Power System (Shipborne Shore Power System) is a system that supplies power to the ship from the port during its port call. It consists of a shipborne device and a shore-based device that transmits power from the shore-based power supply system to the ship's power receiving system through a ship-shore interactive part. This kind of system can replace the traditional diesel generator power supply mode of the ship, reduce the greenhouse gas emissions and air pollution during the port of the ship, and is one of the important technologies to realize green and low-carbon shipping.
