Abstracts

The global Shipping Cooling Packaging Materials market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The upstream of the industry chain for transporting cooling packaging materials is mainly manufacturers of materials such as insulated boxes, ice bags, and frozen food packaging bags, and the downstream is mainly manufacturers, sellers and consumers of various goods that require low-temperature delivery, such as quick-frozen Fresh food, medicine, etc. The market prospect of transport cooling packaging materials is affected by many factors, such as domestic and foreign economic situation, industry demand, technological innovation, product quality, price competition, etc. The logistics packaging material industry is strongly supported by national policies. In recent years, China has issued a series of encouraging policies to provide a favorable external policy environment for the development of the logistics packaging material industry, such as the 'Notice on the Construction of the First Batch of National Backbone Cold Chain Logistics Bases' and 'About Accelerating the Storage and Freshness of Agricultural Products Cold Chain Implementation Opinions on Facilities Construction', 'Implementation Opinions on Further Reducing Logistics Costs', etc.

At the same time, the logistics packaging material industry is facing challenges such as high cost, high technical requirements, and environmental protection pressure. With the tightening of environmental protection policies, the utilization rate of old logistics packaging materials such as wood and petroleum has declined, and the demand for new logistics packaging materials such as stone-plastic masterbatch, plant fiber, and degradable plastics has increased. However, compared with old materials, new logistics packaging materials The cost is high, and the financial pressure of logistics packaging

material manufacturers is increasing. In addition, in the production process of mixing, extruding, cooling, pelletizing, etc., new materials for logistics packaging require the help of related instruments and equipment, but at present, the core equipment of logistics packaging materials in China mainly relies on imports, and the bargaining power of upstream equipment suppliers is relatively high, hinder the development of logistics packaging materials industry.

Transport cooling packaging material is a material used to keep goods in a low temperature state during transportation, and it mainly includes incubators, ice packs, frozen food packaging bags, etc. 1. The function of transport cooling packaging materials is to prolong the shelf life of the goods, prevent the goods from being affected by temperature changes, and ensure the quality and safety of the goods. There are many types of transport cooling packaging materials, and different materials have different characteristics and advantages and disadvantages, such as foam plastics The incubator has the advantages of good heat insulation and low cost, but it also has the disadvantages of being not environmentally friendly and easily damaged; the degradable incubator has the advantages of environmental protection and recyclability, but also has the disadvantages of high cost and difficulty in popularization; the EPP incubator has It has the advantages of high and low temperature resistance, impact resistance, and reusability, but it also has the disadvantages of high price and difficult recycling.
