Abstracts

The global Shipyard Hangar Door market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Doors can be made in multiple-door versions with mullions, in which case the width is unlimited. The door is manufactured in various thicknesses, with the frame thickness determined by the door size.

All shipyard hangar doors are designed to last: with corrosion-protected metal parts and a structure that is highly resistant to dust, dirt and moisture, they require little maintenance. The durability and little need for maintenance result in low life-cycle costs. The tight doors also reduce energy consumption and increase employee comfort.

A shipyard door can be built in extremely large sizes, and can withstand very high wind loads.

Tight and resistant to high wind loads, shipyard doors are manufactured for all wind classes. There are several fabric options available for the doors, including a fabric with a silicone surface resistant to hot metal splashes or a durable rubber fabric for sandblasting and similar facilities. Windows and burglary prevention are available as an optional accessory.
