The global Shock and Vibration Testing Services market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Shock and vibration (dynamics) testing services test finished products or components using shock, sine and random vibration, or other dynamic test conditions. Typically, they perform a battery of tests in accordance with published standards from organizations such as Underwriters Laboratories (UL), the European Community (CE), and the International Standards Organization (ISO). Shock and vibration testing (dynamics) is a subset of product and component testing, a larger category that includes electrical, life, environmental, exposure, dynamic, ergonomic and other specialized tests. Common capabilities of shock and vibration (dynamics) testing services include testing and simulation, component and product comparison, certification and qualification, data acquisition and instrumentation, design verification testing (DVT), failure mode and effects analysis (FMEA), sample preparation, and research and development. Safety, liability, performance, and in-line or in-process testing services are also available.
