Abstracts

The global Shockwave Therapy Machine market size is expected to reach \$ 679 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

In 2025, global shockwave therapy machine production reached approximately 248 k units, the average price is 1900 usd/unit. Shockwave therapy machine is a kind of medical equipment which focuses on the treatment site in vitro. It uses the principles of electrohydraulic, electromagnetic or pneumatic ballistics to generate high-energy mechanical waves, which are transmitted to the focus area of human body through coupling medium. Through mechanical effect, cavitation effect and other mechanisms, it realizes the therapeutic purposes of cracking hardened tissues, promoting vascular regeneration and bone healing. This technology originated from extracorporeal shock wave lithotripsy and has been developed into treatment of bone nonunion, The mainstream non-invasive physical therapy for femoral head necrosis and various chronic soft tissue injury diseases.

Market Concentration and Key Players:

Internationally, the market concentration of shock wave therapy machines is relatively high, mainly concentrated in developed countries such as Europe, America and Japan. For example, Enovis and Storz Medical and other large manufacturers; from the domestic point of view, shock wave therapy machine manufacturers have Shenzhen Huikang Medical Equipment and Xiangyu Medical.

Manufacturing Processes and Market Trends:

The manufacturing process of shock wave therapy machine covers core component manufacturing, circuit integration, final assembly debugging and test inspection. The core components involve piezoelectric ceramics or electromagnetic driver manufacturing and air compressor finishing. The circuit system is integrated through high-frequency SMT and wave soldering. The final assembly stage is completed in the automated assembly line and energy coupling debugging and aging test are carried out. Finally, strict EMC and safety tests are required. The specific technical paths are divided into pneumatic ballistic type, Electromagnetic and piezoelectric, respectively, through compressed gas driving striker, electromagnetic coil driving diaphragm or piezoelectric crystal vibration to generate shock waves, the whole manufacturing process emphasizes precision machining, embedded system development and clean workshop assembly.

Market trends show that the global market for extracorporeal shock wave therapy equipment continues to grow. The growth is mainly driven by the demand for orthopedic and sports injury treatment, the preference for non-invasive therapy and the development of portable equipment. The technology is evolving towards intelligence, portability and precision. The integration of artificial intelligence and the Internet of Things realizes personalized treatment. Wearable equipment has become a new direction. Divergent shock waves dominate the product structure but the proportion of portable equipment increases. Reflecting the trend of rehabilitation scenarios extending from hospitals to families, North America occupies the largest market share in terms of regions, and Asia Pacific has become the fastest growing region due to sinking medical resources and grass-roots construction. However, high equipment costs, limited reimbursement policies and shortage of skilled operators are still challenges facing the market.
