Abstracts

The global Shoe Sole PU Resin market size is expected to reach \$ 2654 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

There are many types of shoe raw materials, including vulcanized rubber, PVC (polyvinyl chloride), EVA (ethylene-vinyl acetate copolymer), TPR (thermoplastic rubber), and polyurethane (PU). Different shoe soles select appropriate raw materials according to functional requirements, or achieve specific properties through blending.

Shoe Sole PU Resin are end-NCO prepolymers synthesized from polyester or polyether polyols and MDI (toluene diisocyanate). They combine the properties of rubber and plastics, possessing advantages such as lightweight, abrasion resistance, good elasticity, comfort, and slip resistance. They are widely used in the production of high-end shoe soles, cushioning insoles, adhesives, and functional shoe soles. Upstream raw materials mainly include MDI and polyester/polyether polyols. Downstream customers include major shoe manufacturers and internationally renowned sports brands such as Nike, Adidas, Skechers, Asics, and Li-Ning. Compared to other shoe sole materials, polyurethane (PU) raw materials exhibit superior performance in terms of lightweighting, abrasion resistance, elasticity, and comfort, and can be formulated to meet the needs of different functional shoe soles.

In 2025, the global production of Shoe Sole PU Resin is approximately 1.1454 million tons, with a unit price of approximately US\$1,621.473 per ton and a gross profit margin of approximately 18.1%. Some companies have an annual production capacity of 55,000 tons, with a capacity utilization rate of 67.8%.

As the global footwear consumer market moves towards functionality, comfort, and

lightweighting, polyurethane soles have become the mainstream choice for shoe sole materials due to their excellent abrasion resistance, elasticity, cushioning performance, and design flexibility. The expansion of niche markets such as athletic shoes, casual shoes, and safety shoes, especially driven by the trend of middle-class consumption upgrading in the Asia-Pacific, North America, and Europe, continues to drive the growth of end-user demand for polyurethane raw materials. PU sole materials not only occupy an important share in the traditional footwear sector but also show growth potential in emerging niche markets such as high-performance running shoes and outdoor shoes. As consumers' demands for comfort and durability increase, manufacturers are inclined to adopt higher-performance polyurethane system raw materials to optimize the performance of end products.

Despite the promising market prospects, fluctuations in raw material costs and supply chain instability are among the main risks hindering the industry's development. The prices of key precursors for polyurethane shoe sole raw materials, such as isocyanates and polyols, are significantly affected by fluctuations in the oil market, and the uncertainty of raw material costs compresses the profit margins of downstream manufacturers. Simultaneously, stricter regulations on environmental protection and low volatile organic compound (VOC) emissions in some regions globally are forcing manufacturers to invest more resources in formulation innovation and emission control, placing cost and compliance pressures on the industry.

The diversified demand landscape of the footwear industry is shaping a trend towards market segmentation in polyurethane shoe sole raw materials. With the increasing influence of athleisure in global popular culture, consumers are increasingly demanding lightweight, highly elastic, and weather-resistant soles. This trend is particularly evident in the athletic and outdoor casual footwear markets, driving raw material manufacturers to offer higher-performance formulation combinations to meet customized needs. Furthermore, the adoption of environmentally friendly and sustainable materials is also driving the evolution of polyurethane shoe sole raw materials towards more environmentally friendly, low-VOC formulations.
