According to our (Global Info Research) latest study, the global Shore Connection Solution market size was valued at US$ 1919 million in 2025 and is forecast to a readjusted size of US$ 3321 million by 2032 with a CAGR of 8.2% during review period.

Shore Connection Solution is a comprehensive technical solution designed to meet the power needs of ships while at berth, allowing them to switch from fuel-fired power generation to shore-based power at ports. It covers hardware equipment selection and configuration, electrical system design and integration, intelligent control and management, as well as supporting operational specifications and safety measures. It aims to reduce emissions from ships at berth, lower noise pollution, improve port environmental quality, and optimize energy efficiency.

Future Development Trends in the Shore Connection Solution Industry

Policy drivers continue to intensify: To address climate change and improve port air quality, governments around the world will further introduce stringent environmental regulations and incentives. On the one hand, they are continuously raising the percentage of shore power required for ships at ports, imposing penalties such as fines on companies that fail to meet these standards. On the other hand, they are increasing financial subsidies and tax incentives for the construction and renovation of shore power facilities, reducing investment costs and operational risks for ports and shipping companies, and promoting the widespread adoption of shore power connection solutions.

Technological innovations are constantly emerging: On the hardware side, more

efficient, compact, and durable shore power equipment, such as high-performance transformers and lightweight cables, are being developed to meet the needs of ports and ships of varying sizes. The intelligence of these equipment is being enhanced to enable automatic connection, remote monitoring, and fault diagnosis, reducing manual intervention and improving operational efficiency and safety. On the software side, big data and artificial intelligence are being leveraged to optimize the operation and management of shore power systems, enabling precise energy distribution and dynamic scheduling, and improving energy efficiency. Furthermore, emerging technologies such as wireless charging are expected to achieve breakthroughs, bringing new changes to shore power connections. The market continues to expand: With the growth of global trade and the booming shipping industry, port throughput is increasing, and the number of ship calls is also increasing. This will directly drive market demand for shore power connection solutions. Furthermore, the increasing emphasis on environmental protection in emerging economies and developing countries will accelerate the construction of shore power facilities, further expanding the market space. The shore power connection solution market is expected to maintain rapid growth in the coming years.

Diversification of service models: In addition to providing shore power equipment and connection solutions, companies will also expand value-added services such as shore power operation and maintenance, data analysis services, and energy management, providing customers with one-stop solutions to meet their diverse needs, enhance customer loyalty, and enhance market competitiveness.
