The global Shore Power Transformer market size is expected to reach \$ 1783.2 million by 2030, rising at a market growth of 5.8% CAGR during the forecast period (2024-2030).

A shore power transformer, also known as a shore power supply system or shore-to-ship power system, is an electrical infrastructure that allows ships to connect to the local electrical grid while berthed in a port. This allows the ship to turn off its auxiliary engines, reducing emissions and noise pollution. Shore power transformers play a crucial role in enabling the transfer of electrical power between the shore and the ship.
