The global Short Alligator Clip market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The Short Alligator Clip is an electronic component testing and connection tool. It usually consists of two metal clips and an insulated wire, the clip is shaped like an alligator's mouth, which can be clamped on the pins, wires, cables or other test points of electronic components for signal testing, measurement or connection. The main advantage of alligator clips is the small and flexible clip size for tight spaces and small test points. At the same time, due to the small opening of the clip, it can also clamp the pins of small electronic components to ensure stable testing and connection. Alligator clips are commonly used in electronics experimentation, testing, and repair work.
