According to our (Global Info Research) latest study, the global Short Fiber Thermoplastic (SFT) market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Short fiber thermoplastics (SFT) is a composite material made of a thermoplastic resin reinforced with short fibers. In general, with short fiber reinforcement, the fiber length is on the order of 100 times the fiber OD. Since most fibers are much smaller in diameter than a human hair, short fibers look more like powder to the unassisted eye. Short fiber reinforced thermoplastics tends to be manufactured by mixing the fibers into the molten thermoplastic. The fiber length and random orientation within the matrix make it relatively easy to achieve a good wet-out (i.e. completely encase all fibers with matrix) with this method. When compared to long and continuous fiber reinforcements, short fibers composites are the easiest to manufacture, but offer the smallest increase in mechanical properties.

Global key players of short fiber thermoplastic (SFT) include BASF, DuPont, SABIC, etc. Global top three manufacturers hold a share over 50%. Europe and North America is the main producer of short fiber thermoplastic (SFT). In terms of product, polyamide (PA) is the largest segment, with a share over 45%. In terms of application, the largest application is transportation, with a share over 30%, followed by home appliances and electrical and electronics.
