## Abstracts

According to our (Global Info Research) latest study, the global Short Glass Fiber Reinforced Polyamide market size was valued at USD 1889.2 million in 2023 and is forecast to a readjusted size of USD 3127 million by 2030 with a CAGR of 7.5% during review period.

The main characteristics of glass fibre reinforced polyamides are very high rigidity, high mechanical strength, a high degree of hardness and toughness, as well as high creep strength. They also have very high dimensional stability, good fatigue strength and high mechanical damping properties.

Composites include fiber-reinforced materials and organic matrices, with the most commonly used materials being Glass Fiber Reinforced Polymer (GFRP) and Carbon Fiber Reinforced Polymer (CFRP) composites, followed by composites reinforced with aramid or natural fibers. After a decline in production in 2020, the global composites industry is gradually returning to pre-pandemic growth rates, with the energy, electronics/electrical, construction, marine and consumer goods markets showing rapid recovery. New growth opportunities are also emerging in emerging sectors such as electric and hydrogen-fueled vehicles, marine, sports and recreation, medical, electrical and electronics, oil and gas, furniture and design, defense and security, and renewable energy. Between now and the future, composites will provide higher performance, lighter, more energy efficient as well as more durable products in a wider range of applications and markets.
