Abstracts

The global Short Glass Fiber Reinforced Polypropylene market size is expected to reach \$ 4206 million by 2032, rising at a market growth of 6.7% CAGR during the forecast period (2026-2032).

Global sales of short glass fiber reinforced polypropylene reached 813,891 tons in 2025, with an average price of US\$3,238 per ton.

Short glass fiber reinforced polypropylene (SGFPP) is a thermoplastic composite material obtained by extruding and injection molding a blend of short, alkali-free glass fibers (10-40% by mass) with polypropylene resin, compatibilizer (PP-g-MAH), antioxidants, etc., with a length of 0.2-0.6 mm. Because the fiber length is below the critical length, its reinforcement efficiency is lower than that of long glass fiber grades, but the molding process is simple, the equipment is universal, and complex thin-walled parts can be manufactured quickly.

Short glass fiber reinforced polypropylene (SGFPP) consists of three parts: a matrix of high-flow polypropylene resin (homogeneous or copolymer, MFR 25-100 g/10 min), a reinforcing phase of 2-4 mm alkali-free chopped glass fibers (10-14 μm in diameter, 10-30 wt%) treated with a silane coupling agent, and an additive system including PP-g-MAH compatibilizer, hindered phenol/phosphite antioxidant, stearate lubricant, etc., totaling approximately 3-5 wt%. In the cost structure, polypropylene resin accounts for approximately 45-55%, chopped glass fibers 35-45%, compatibilizers and additives 5-10%, and the remainder is from extrusion granulation and injection molding energy consumption. Due to the relatively low price of glass fiber and the lack of complex impregnation equipment, SGFPP has the lowest cost per ton among the three types of glass fiber reinforced polypropylene, making it the mainstream choice for automotive interior and exterior trim parts and body panels.
