Abstracts

The global Short Shaft Compressor market size is expected to reach \$ 4855 million by 2032, rising at a market growth of 5.6% CAGR during the forecast period (2026-2032).

In this report, 'short-shaft compressor' is defined as a compact centrifugal compressor architecture using a short high-speed rotor shaft, mainly covering single-shaft centrifugal compressors, integrally geared centrifugal compressors, and magnetic-/air-bearing high-speed direct-drive centrifugal compressors. It excludes conventional screw, reciprocating and scroll compressors, shaft-component suppliers, distributors, EPC contractors and service-only firms. The upstream chain includes impellers/rotor shafts, gearboxes, bearings or magnetic bearings, seals, castings/forgings, motors or steam turbines, controls, cooling and lubrication systems; downstream users include refining and petrochemicals, LNG/pipelines, air separation and industrial gases, chemicals/fertilizers, CCUS/CO₂, wastewater treatment, food/pharma/electronics and HVAC chillers. Public pricing is scarce: industrial oil-free centrifugal units are typically in the hundreds of thousands to several million USD, while large process-gas/CO₂ trains can reach several million to tens of millions USD; estimated new-equipment gross margins are roughly 15%-40%, generally below aftermarket margins and highly dependent on customization, service mix and project risk.

This report studies the global Short Shaft Compressor production, demand, key manufacturers, and key regions.
