Single-walled carbon nanotubes (SWCNTs) are cylindrical nanostructures made up of a single layer of carbon atoms arranged in a hexagonal lattice. These structures exhibit unique and remarkable electronic, thermal, and mechanical properties, making them of great interest in various scientific and technological applications. When the term "short single-walled carbon nanotubes" is used, it typically refers to SWCNTs that have a relatively short length compared to their diameter. The length of carbon nanotubes can vary widely, ranging from a few nanometers to several micrometers. Short SWCNTs may have lengths on the order of a few nanometers or up to a few hundred nanometers.
