Abstracts

The global Short Term Bread market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Bread uses water, wheat flour, yeast, etc. as raw materials. It is stirred to form a dough, and it is made into a soft and porous food through fermentation, proofing, baking, etc., which can be eaten directly or after reprocessing. According to the length of shelf life, bread can be divided into long-guaranteed bread, medium-guaranteed bread, short-guaranteed bread, etc. Among them, short-guaranteed bread has a shorter shelf life, but better taste and freshness. After years of development, the types of short-term bread in my country have become increasingly rich, and its product types mainly include sliced ??bread, milk stick bread, meat floss bread, shredded bread, etc.

Short-term bread refers to bread with a shelf life of 4-15 days (7-15 days in winter and 4-7 days in summer) and a sales radius of 300-500km. Due to the short shelf life of short-term bread, the requirements for stable logistics distribution and channel terminal construction are relatively high. Unimpeded terminal channels can reduce the return rate, and increasing the number of outlets within the coverage of the central factory will effectively increase sales in the unit area.
