A shortpass filter is a filter that selectively passes shortwave radiation. It can be used to prevent the impact of short-wave radiation on certain equipment or systems, such as used in radio communication, and can be used to prevent interference and improve communication quality. Short-wave pass filters can also be used in solar panels, infrared sensors, and other devices to selectively pass short-wave radiation and block radiation in other bands. The working principle of a short-wave pass filter is based on the properties of its material, which can selectively pass short-wave radiation and block radiation in other bands. Commonly used materials include glass, quartz, plastic, etc. Among them, glass and quartz have better selectivity and can be used in high-precision applications. In addition, short-pass filters can also be customized to meet different application requirements.
