The short-wave therapy instrument is an instrument that uses biophysical methods to treat diseases. The electromagnetic wave of the short-wave therapy instrument has a lower frequency than the previous radio frequency microwave, and the wavelength has strong penetrating power. During the treatment, the body temperature can reach about 43°C. It adopts a semiconductor high-power water circulation system that can be cooled and heated, and has the function of simulating the treatment temperature of the affected part in real time, making the treatment more accurate and effective, thereby enhancing the effective penetration depth and improving the treatment efficiency. Generally, after one to two courses of treatment, You can receive a very satisfactory curative effect, and the treatment process is comfortable. It has a very obvious therapeutic effect on prostatitis, benign prostatic hyperplasia and urinary system inflammation.
