## Abstracts

The global Shrinkage Compensating Additives market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Shrinkage Compensating Additives is by adding concrete expansion agent in concrete, so that reinforced concrete in the position of the steel bar under the restriction, produce a certain chemical self-stress, used to reduce or eliminate the concrete due to shrinkage shrinkage or temperature difference cracks, so that concrete has crack resistance and seepage resistance performance. Among the three types of expansion agent, calcium sulfoaluminate system has become the main type of concrete expansion agent because of its stability of expansion.
