Abstracts

According to our (Global Info Research) latest study, the global Shrinkage-Reducing Admixtures market size was valued at USD 228.1 million in 2023 and is forecast to a readjusted size of USD 322.5 million by 2030 with a CAGR of 5.1% during review period.

Shrinkage-reducing admixtures (SRAs) are used to reduce the shrinkage of concrete, whether from drying or self-desiccation. In contrast to other concrete admixtures, they are used in rather large amounts. This is because the interfacial area at which they must act (liquid–vapor) increases radically in the course of drying. Indeed, hardened cementitious materials have large internal surface area, which when covered only by liquid films, provides a very large interfacial area where the SRAs must remain active.

Sika is one of the most important global key players of the shrinkage-reducing admixture, holds over 10% of shares of the global shrinkage-reducing admixture market, other key players include GCP Applied Technologies, Inc, Nippon Shokubai, Saint-Gobain, etc. North America is the largest market, occupied for over 30 percent, followed by Europe. In terms of type, polyethers is the largest segment, with a share of over 50%, and in terms of application, the infrastructure construction segment holds a share of over 30 percent.
