According to our (Global Info Research) latest study, the global Shrinkwrap Packer market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Shrink packaging is used to combine small products and package them together as a way to increase durability. The process involves making bundles of commodities to provide protection against routine wear and tear. The chances of damage through exposure to moisture or water is greatly reduced by this method. This packaging works best for small items, making bundles of the same to enable seamless transportation. Heat plays a very important role in the market process. The two major steps involved in the shrink wrap packaging process requires a heat machine and shrink wrap thereafter. Shrink is a category of polymer plastic wrap, comprising of polyethylene, polyvinyl chloride (PVC) and polyolefin. The material which is highly consumed in shrink wrap is polyolefin. These wraps also commonly called as films, vary according to visibility, tenacity, shrinking capacity and sturdiness and can be used accordingly serving various purposes. The process of shrink packaging is enclosing and securing the item or bundles with the film or wrap with the help of a heat gun or heat tunnel.
