Abstracts

According to our (Global Info Research) latest study, the global SiC Axle Sleeve market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Silicon Carbide (SiC) axle sleeves, also known as SiC bearing sleeves or SiC bushings, are components used in various mechanical systems and industrial applications. These sleeves are typically made from silicon carbide, a high-performance ceramic material known for its excellent mechanical properties. SiC axle sleeves are used to support and protect rotating axles or shafts. They are commonly found in pumps, compressors, and other machinery where corrosion resistance, wear resistance, and high-temperature capabilities are required.

According to the SEMI report, the semiconductor materials market will grow by 8.6% in 2022, reaching a market size of 69.8 billion US dollars new highs. Since semiconductor materials belong to high-tech barrier industries, most of the high-end products of semiconductor materials are currently concentrated in the United States, Japan, Germany and other countries and regions. From the perspective of demand, China Taiwan, China mainland, South Korea, Japan, and the United States are the largest semiconductor material markets in the world, accounting for more than 80% of the global market.

In 2022, relying on its wafer foundry capabilities and advanced packaging base, China Taiwan continued to occupy the throne of the global semiconductor material market with sales of US$16.17 billion; China had the strongest year-over-year growth in 2022, coming in second with $13.87 billion in sales; South Korea remained the third-largest consumer of semiconductor materials.
