According to our (Global Info Research) latest study, the global SiC Coated Graphite Carrier market size was valued at US\$ 345 million in 2025 and is forecast to a readjusted size of US\$ 617 million by 2032 with a CAGR of 8.6% during review period.

A SiC (Silicon Carbide) Coated Graphite Carrier is a specialized component used in semiconductor manufacturing and other high-temperature industrial processes. The graphite carrier provides a strong, lightweight, and thermally stable base, while the silicon carbide coating offers excellent chemical resistance, thermal conductivity, and durability. This combination makes SiC coated graphite carriers ideal for handling and transporting silicon wafers and other delicate materials during high-temperature processes such as chemical vapor deposition (CVD) and etching. The SiC coating protects the graphite from oxidation and contamination, ensuring high purity and performance in demanding environments. The price of this product is approximately \$3,500-\$4,200 per piece.

The upstream of SiC coated graphite carriers consists of high-purity graphite materials and chemical vapor deposition precursors, while the downstream is primarily driven by MOCVD equipment manufacturers and LED, GaN, and SiC epitaxy producers requiring high-temperature, high-purity wafer handling components.

From a research report perspective, the SiC coated graphite carrier market is characterized by a combination of high technical barriers and strong application specificity, positioning it as a critical yet niche component within the compound semiconductor equipment ecosystem. Demand growth is primarily driven by the expansion of LED, GaN, and SiC power device production, where increasingly stringent

requirements on thermal uniformity, contamination control, and equipment compatibility are pushing suppliers toward higher coating quality and longer service life solutions. At the same time, the market exhibits a clear tiered structure, with international players maintaining an advantage in high-end applications due to superior coating processes and material consistency, while domestic manufacturers continue to gain share in cost-sensitive and mid-range segments. Looking ahead, the market is expected to benefit from the scaling of wide bandgap semiconductor applications and larger wafer sizes, although pricing pressure and customization requirements will continue to shape competitive dynamics and margin structures.
