A side clamp, also known as a side push clamp, is a jig for cutting and is a clamping component that presses down on an object from the side. It is used as a clamp when machining the top surface of an object. The side clamp must be used in accordance with the shape of the object and the machining process to securely and firmly clamp the object while avoiding any interference between the object and the tool.

The objects to be processed with a side clamp include a wide variety of shapes, such as small, thin, and irregularly shaped objects. Side clamps are also required in many machining processes, such as roughing and finishing.
